

“Aquaroots” product press release. “Produce water from the air, anytime and anywhere”

Concept:

The Global issue of clean water shortages is getting worse year on year. It has been estimated that by 2040 about 6 million children worldwide, which is the one in four children will have to live in areas where there's limited water resources available according to the 2016 Report by UNISEF.

We are developing the technology to rapidly produce water on demand while also being portable. At the press conference, we will be sharing information regarding this technology and its future applications.

The product “Aquaroots” uses this technology and is in the convenient form of a water bottle. It can quickly produce water from the air. The yield is remarkable, a glass of water from the air in a minute.
